03 – MODEL EXPLANATION

THE MOBILE PHONE STORE MODEL

Our model is designed to include all mobile phone shops in Spain. This model helps shops all over Spain to manage purchases of different types of phones (Apple, Samsung, and Xiaomi) in any shop. The ticket is the main entity of this model. The details of the shop, such as its location and the address where the customer buys the product, are linked to the ticket details. The payment details are also included in our database in encrypted format in accordance with government-issued standards. The vendor who sold the specific product to the customer is also linked to the ticket entity. As this model is designed for mobile shops in Spain, it only handles EURO currency. This model has information about all the products that are available in the mobile shops in Spain and the supplier of the product to the mobile shop. The product has information about the color and its year of release along with its internal storage details which are mandatory for a customer to select purchase options. (The product details are also linked to the Ticket entity).

This model has the TICKET as the main entity and the seller, the shop, the product, the brand, and the payment details are linked to the ticket entity.

DISCLAIMER:

This model stores the customer and the customer's payment information on the terms agreed upon by the customer during the purchase of the products.

WHAT DOES THE MODEL ADD TO THE COMPANY:

This model helps shops throughout Spain to manage the customer's product purchase information. They have this information stored in their operational database, which helps shops analyze which product sells best in which shop, which payment method is used most for payments, and other data that management can use for data analysis to improve services accordingly.

04 – QUESTIONS & QUERIES

1) Which are the top 3 phone sales?

```
SELECT P.PRODUCT_ID, TI.QUANTITY, PHONE_NAME
FROM PRODUCT P INNER JOIN TICKET_ITEM TI
ON P.PRODUCT_ID = TI.PRODUCT_ID
INNER JOIN INVENTORY I
ON I.PRODUCT_ID = P.PRODUCT_ID
ORDER BY QUANTITY DESC
LIMIT 3;
```

```
32 •   SELECT P.PRODUCT_ID, TI.QUANTITY, PHONE_NAME
33     FROM PRODUCT P INNER JOIN TICKET_ITEM TI
34     ON P.PRODUCT_ID = TI.PRODUCT_ID
35     INNER JOIN INVENTORY I
36     ON I.PRODUCT_ID = P.PRODUCT_ID
37     ORDER BY QUANTITY DESC
38     LIMIT 3;
39
```

The screenshot shows a database query results grid. The grid has a header row with columns labeled 'PRODUCT_ID', 'QUANTITY', and 'PHONE_NAME'. Below the header, there are three data rows. The first row contains 'XM39028U', '3', and 'Xiaomi 12 Ultra'. The second row contains 'SM-G793', '2', and 'Samsung Galaxy S22'. The third row contains 'A2895', '2', and 'iPhone 14 Pro Max 256GB'. The 'QUANTITY' column is sorted in descending order, with 'XM39028U' having the highest value of 3.

| | PRODUCT_ID | QUANTITY | PHONE_NAME |
|---|------------|----------|-------------------------|
| ▶ | XM39028U | 3 | Xiaomi 12 Ultra |
| ▶ | SM-G793 | 2 | Samsung Galaxy S22 |
| ▶ | A2895 | 2 | iPhone 14 Pro Max 256GB |

2) Show the revenue per type of credit card.

```
SELECT CT.CARD_TYPE, CT.CCDESCRIPTION, SUM(TOTAL_ORDER_AMOUNT) AS  
CC_TOTAL_ORDER_AMOUNT  
FROM TICKET T INNER JOIN PAYMENT P  
ON (T.PAYMENT_ID = P.PAYMENT_ID)  
INNER JOIN CARD C  
ON (C.PAYMENT_ID = P.PAYMENT_ID)  
INNER JOIN CARD_TYPE CT  
ON (CT.CARD_TYPE = C.CARD_TYPE)  
GROUP BY C.CARD_TYPE  
ORDER BY CC_TOTAL_ORDER_AMOUNT DESC;
```

```
2 •  SELECT CT. CARD_TYPE, CT.CCDESCRIPTION, SUM(TOTAL_ORDER_AMOUNT) AS  
3   CC_TOTAL_ORDER_AMOUNT  
4   FROM TICKET T INNER JOIN PAYMENT P  
5   ON (T.PAYMENT_ID = P.PAYMENT_ID)  
6   INNER JOIN CARD C  
7   ON (C.PAYMENT_ID = P.PAYMENT_ID)  
8   INNER JOIN CARD_TYPE CT  
9   ON (CT.CARD_TYPE = C.CARD_TYPE)  
10  GROUP BY C.CARD_TYPE  
11  ORDER BY CC_TOTAL_ORDER_AMOUNT DESC;
```

The screenshot shows a database query results grid. At the top, there are buttons for 'Result Grid' (selected), 'Filter Rows', 'Export', and 'Wrap Cell Content'. The grid itself has three columns: 'CARD_TYPE', 'CCDESCRIPTION', and 'CC_TOTAL_ORDER_AMOUNT'. The data rows are:

| | CARD_TYPE | CCDESCRIPTION | CC_TOTAL_ORDER_AMOUNT |
|---|-----------|---------------|-----------------------|
| ▶ | MC | Master Card | 10268.06 |
| | DS | Discover Card | 6060.89 |
| | VC | Visa Card | 1208.79 |

3) Which brand are we selling the most this year?

```
SELECT a.BRAND_ID, a.BRAND_NAME, SUM(d.TOTAL_ORDER_AMOUNT) AS BRAND_TOTAL_AMOUNT
FROM BRAND a INNER JOIN PRODUCT b ON (a.BRAND_ID = b.BRAND_ID)
INNER JOIN TICKET_ITEM c ON (b.PRODUCT_ID = c.PRODUCT_ID)
INNER JOIN TICKET d ON (c.TICKET_ID = d.TICKET_ID)
WHERE YEAR(TIMEPLACED) = year(current_date())
GROUP BY a.BRAND_ID
ORDER BY BRAND_TOTAL_AMOUNT DESC
LIMIT 1;
```

```
40 •   SELECT a.BRAND_ID, a.BRAND_NAME, SUM(d.TOTAL_ORDER_AMOUNT) AS BRAND_TOTAL_AMOUNT
41     FROM BRAND a INNER JOIN PRODUCT b ON (a.BRAND_ID = b.BRAND_ID)
42     INNER JOIN TICKET_ITEM c ON (b.PRODUCT_ID = c.PRODUCT_ID)
43     INNER JOIN TICKET d ON (c.TICKET_ID = d.TICKET_ID)
